

The circle graph below shows the countries that could generate the largest electricity from the sun in the end of 2019.

Solar power by countries

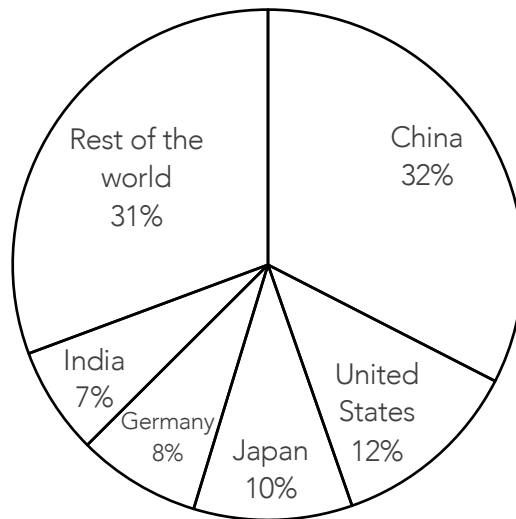

1. What country generated the largest amount of electricity from the sun in the world?
2. Which country generated more electricity from the sun, the United States or Germany?
3. What percentage do the five countries make up?
4. What country generated four times as much electricity as Germany?
5. What county makes up $\frac{1}{10}$ of the whole?

Answer Key

The circle graph below shows the countries that could generate the largest electricity from the sun in the end of 2019.

Solar power by countries, 2019

1. What country generated the largest amount of electricity from the sun in the world?

China

2. Which country generated more electricity from the sun, the United States or Germany?

The United States

3. What percentage do the five countries make up?

$$32 + 12 + 10 + 8 + 7 = 69 (\%)$$

$$\text{Or } 100 - 31 = 69 (\%)$$

4. What country generated four times as much electricity as Germany?

China

5. What country makes up $\frac{1}{10}$ of the whole?

Japan
