

Water on Earth is broadly distributed as **saltwater** in the oceans and **freshwater**. Saltwater makes up 97% of the total volume of the Earth's water and the rest is freshwater.

1. Color the portion of salt water green and the portion of freshwater blue. Use the pictures to show which one is which.

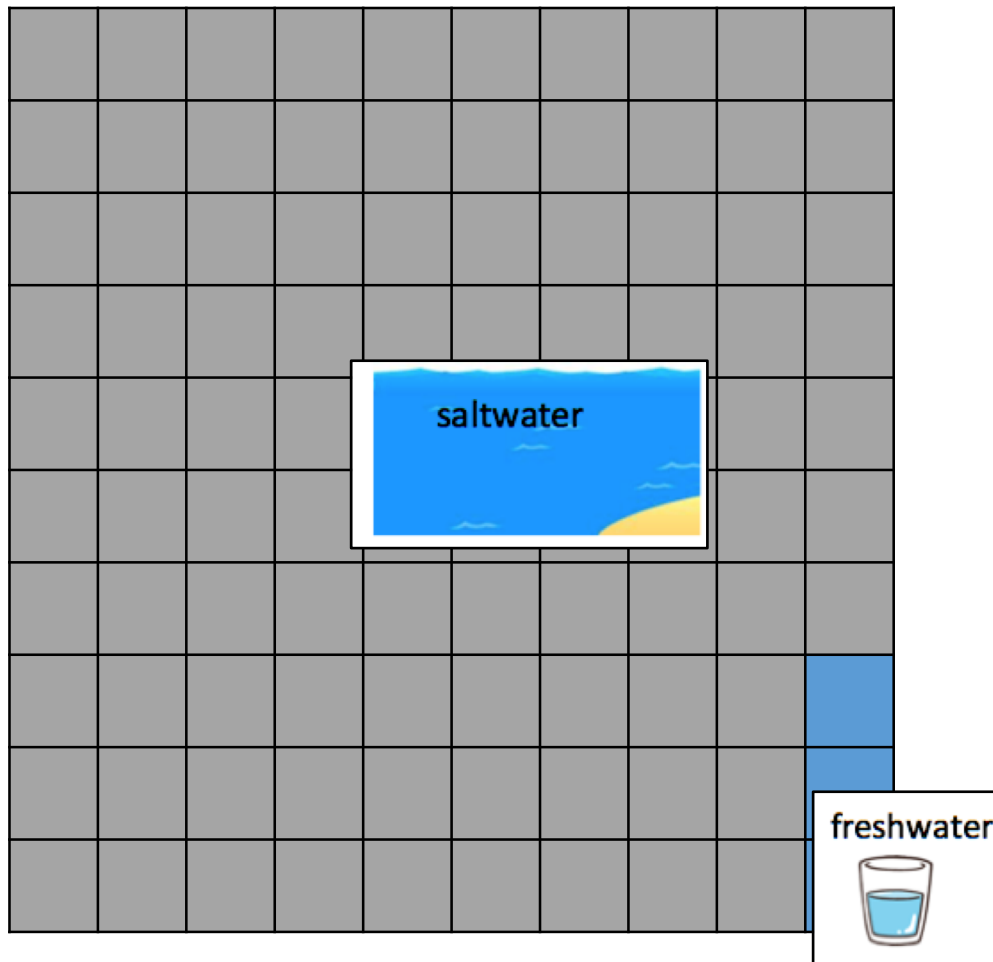

2. What percentage of Earth's water does freshwater make up?
3. Write what you have found from the figure.

Water on Earth is broadly distributed as **saltwater** in the oceans and **freshwater**. Saltwater makes up 97% of the total volume of the Earth's water and the rest is freshwater.

## Answer Key

1. Color the portion of salt water green and the portion of freshwater blue. Use the pictures to show which one is which.

2. What percentage of Earth's water does freshwater make up?

$$100 - 97 = 3 (\%)$$

3. Write what you have found from the figure.

Answers may vary.
