

## MEASUREMENT (MASS)

### Vulnerable species Giant Pandas – How much do they eat?

Giant pandas are at risk because their habitats in China have been destroyed as the population in the country grows. The size of the forests where pandas can live has become smaller and smaller, and giant pandas have had a hard time finding mates and food. They must eat up to 84 pounds of bamboo every day. A giant panda grows up to 330 pounds as an adult.

1. It might take about 10 \_\_\_\_\_ to weigh as much as the bamboo that a giant panda eats a day.
  - a. bananas
  - b. tables
  - c. one-gallon bottles of milk
2. It might take about \_\_\_\_ 5th graders to weight as much as a giant panda.
  - a. 2
  - b. 4
  - c. 8
3. A ton is 2,000 pounds. It might take about \_\_\_\_ giant pandas to weight a ton.
  - a. 6
  - b. 9
  - c. 12
